

EXHIBIT A

TRAINPI OPERATIONAL WORKFLOW & FUNCTIONAL REQUIREMENTS

May 2026

EXECUTIVE SUMMARY

This document serves as Exhibit A to the TrainPi Development Agreement between NanTechs and the Developer and defines the intended operational workflows, functional requirements, platform logic, and core system objectives for the TrainPi platform.

TrainPi is an AI-guided operational workforce readiness platform designed to help individuals and organizations identify workforce capability gaps, analyze operational alignment, and generate personalized readiness pathways aligned to real-world job environments.

Unlike traditional learning management systems or generic career guidance platforms, TrainPi combines participant skills analysis with organizational operational context to create workflow-aware and mission-aligned workforce readiness assessments.

The platform operates through a structured five-step workflow:

- 1. Participant Profile**
Participants upload resumes, certifications, skills, and experience information to create a workforce capability profile.
- 2. Operational Context Ingestion**
Organizations upload operational documents such as SOPs, workflows, role descriptions, mission objectives, and skill frameworks to define real-world workforce expectations.
- 3. AI Analysis & Comparison**
TrainPi's AI engine processes both participant and organizational data to identify matched skills, missing capabilities, workflow gaps, readiness risks, compliance gaps, and operational alignment concerns.

4. Results & Insights

The platform generates workforce readiness scores, strengths analysis, capability alignment summaries, and operational gap insights through an interactive dashboard.

5. Personalized Roadmap & Pathway

TrainPi generates AI-guided personalized development pathways aligned to operational requirements, workforce goals, and organizational readiness needs.

The platform is intended to support workforce readiness, cybersecurity and IT career pathways, operational skills development, experiential learning, and AI-guided capability analysis within real-world organizational environments.

5

Roadmap & Pathway

Step 2 of 5: Add Operational Context
Upload documents that describe the work, processes, and requirements in your organization.

SOPs & Policies
Standard Operating Procedures, policies, and internal guidance.

Upload Files

PDF, DOCX, TXT (Max 25MB)

Workflows & Processes
Process maps, workflow diagrams, or operational procedures.

Upload Files

PDF, DOCX, PNG, TXT (Max 25MB)

Role Descriptions
Job descriptions, role expectations, and key responsibilities.

Upload Files

PDF, DOCX, TXT (Max 25MB)

Mission & Objectives
Mission statements, strategic goals, or program objectives.

Upload Files

PDF, DOCX, TXT (Max 25MB)

Skill Frameworks
Competency models, skill frameworks, or capability models.

Upload Files

PDF, DOCX, TXT (Max 25MB)

Other Supporting Docs
Any other documents that help our AI understand your operational environment.

Upload Files

PDF, DOCX, TXT (Max 25MB)

Why Operational Context?
Uploading SOPs, workflows, and role information helps our AI understand the real work, required capabilities, and mission needs—so we can identify gaps and recommend the right path.

What You'll Get

- Operational readiness assessment
- Capability gap analysis
- Role alignment insights
- Personalized development pathway
- Mission & strategic alignment

Pro Tip
The more operational context you provide, the more accurate and relevant your results will be.

Examples

- IT incident management SOP
- Onboarding workflow
- Help desk escalation process
- Role description for Cybersecurity Analyst

AI Analysis in Progress

Comparing your profile with uploaded operational documents...

Your Profile

- Resume & Experience ✓
- Skills & Certifications ✓
- Years of Experience ✓

AI Analysis Engine

Operational Context

- ✓ SOPs & Policies
- ✓ Workflows & Processes
- ✓ Role Descriptions
- ✓ Mission & Objectives
- ✓ Skill Frameworks
- ✓ Other Supporting Docs

Analysis Progress

68%

Extracting skills, responsibilities, requirements, and workflows...

What We're Analyzing

Skills Match
Comparing your skills with role requirements

Experience Alignment
Matching your experience to job responsibilities

Gap Identification
Finding capability and knowledge gaps

Workflow Readiness
Assessing readiness for operational workflows

Mission Alignment
Evaluating alignment with mission & objectives

Development Priorities
Identifying key areas to growth and excel

Why Analysis Matters

Our AI analyzes your profile against real operational requirements to uncover gaps, strengths, and opportunities—ensuring recommendations are accurate and mission-aligned.

What You'll Get

- ✓ Operational readiness assessment
- ✓ Capability gap analysis
- ✓ Role alignment insights
- ✓ Personalized development pathway
- ✓ Mission & strategic alignment

Pro Tip

The more complete your profile and operational documents, the more accurate and actionable your results will be.

Examples

- IT incident management SOP
- Onboarding workflow
- Help desk escalation process
- Role description for Cybersecurity Analyst

For Step 1:

Keep the current resume upload flow, but upgrade it into a “Participant Profile” step. The main changes are adding the 5-step workflow bar, updating the language to workforce readiness, and making sure resume + skills data are saved for comparison against agency documents in later steps.

You need to Change the Left Navigation Bar options

STEP 2**Most Important Concept for Developer**

Step 2 is what transforms TrainPi from:

“career guidance platform”

into:

“operational workforce readiness platform”

This step is the foundation for:

- workflow-aware analysis
- mission-aware recommendations
- operational readiness scoring
- strategic workforce alignment

That is the core direction we are moving toward.

Important notes:

Backend Requirements

New Organizational Context Object

Store uploaded operational documents separately from participant data.

Suggested structure:

- organization_documents[]
- document_type
- parsed_text
- extracted_requirements
- extracted_skills
- extracted_workflows
- extracted_role_expectations
- extracted_keywords

AI Processing Requirements

When documents are uploaded:

1. Extract text
2. Classify document type
3. Extract operational requirements

4. Extract workflows/processes
5. Extract role expectations
6. Extract required capabilities
7. Store processed organizational context

This processed data will be used in Step 3 comparison engine.

1. Participant documents are processed into a “Participant Profile”

TrainPi extracts:

- work history
- current skills
- certifications
- tools used
- years of experience
- projects/tasks performed
- strengths
- missing or unclear skills

Output:

Participant Capability Profile

Example:

Active Directory, help desk support, ticketing, Microsoft 365 admin, basic phishing awareness, limited SIEM/log analysis experience.

2. Agency documents are processed into an “Operational Requirements Profile”

TrainPi extracts:

- required role responsibilities
- SOP steps
- workflows
- required tools
- policy/compliance expectations
- mission objectives
- required competencies
- operational risks

Output:

Agency Operational Profile

Example:

SOC analyst must review SIEM alerts, document incidents, follow escalation workflow, analyze logs, coordinate with IT/security teams, and comply with reporting procedures.

3. TrainPi compares both profiles

This is the core logic:

Participant Profile

vs.

Agency Operational Requirements

TrainPi identifies:

- matched skills
- missing skills
- partial skills
- workflow gaps
- tool gaps
- policy/compliance gaps
- mission alignment gaps
- readiness risks

Example:

Area	Participant	Agency Requirement	Result
SIEM	No experience shown	Must triage alerts	Major gap
Ticketing	Has experience	Required for documentation	Match

TRAINPI OPERATIONAL WORKFLOW

Area	Participant	Agency Requirement	Result
Incident escalation	Not shown	Required in SOP	Gap
Microsoft 365	Has experience	Helpful for environment	Strength

TrainPi should process the documents into structured profiles, then compare them:

Participant skills and experience are extracted from resume/documents. Agency requirements are extracted from SOPs, workflows, role descriptions, mission goals, and skill frameworks. TrainPi then compares both sides to identify strengths, gaps, readiness risks, and builds a personalized roadmap aligned to the agency's real operational environment.

That is the whole product logic.

More Details

TRAINPI OPERATIONAL WORKFLOW & FUNCTIONAL REQUIREMENTS

Version: May 2026

Prepared for: NanTechs

OVERVIEW

TrainPi is evolving from a traditional career guidance platform into an AI-guided operational workforce readiness platform.

The core objective of TrainPi is to:

- analyze participant skills and experience,
- compare them against real operational environments,
- identify readiness gaps,

- and generate personalized workforce readiness pathways aligned to actual organizational workflows, missions, and role expectations.

The platform is designed to support workforce readiness, operational alignment, AI-guided learning, cybersecurity career pathways, and experiential workforce development.

CORE PRODUCT DIRECTION

TrainPi is NOT intended to function solely as:

- a course platform,
- a resume builder,
- or a static LMS.

TrainPi is intended to function as:

- an operational readiness analysis platform,
- AI-guided workforce capability assessment system,
- workflow-aware learning environment,
- mission-aligned workforce readiness engine,
- and personalized roadmap generation platform.

HIGH-LEVEL USER WORKFLOW

The TrainPi workflow consists of five primary operational stages:

STEP 1 — PARTICIPANT PROFILE

Purpose:

Capture participant background, skills, experience, certifications, and career interests.

Frontend Workflow:

- Resume upload
- Skills input

- Years of experience
- Current/target role
- Certifications
- Additional notes

Backend Processing:

TrainPi extracts:

- work history
- current skills
- certifications
- tools/platforms used
- years of experience
- projects/tasks performed
- strengths
- missing or unclear skills

Output:

Participant Capability Profile

Example:

Active Directory, help desk support, Microsoft 365 administration, ticketing systems, phishing awareness, limited SIEM/log analysis exposure.

STEP 2 — OPERATIONAL CONTEXT INGESTION

Purpose:

Allow organizations/agencies to upload operational context documents that define real-world workforce requirements.

Supported Document Categories:

- SOPs & Policies

- Workflows & Processes
- Role Descriptions
- Mission & Objectives
- Skill Frameworks
- Additional Supporting Documents

Supported File Types:

PDF, DOCX, TXT, PNG

Core Concept:

This step transforms TrainPi from:

“career guidance platform”

into:

“operational workforce readiness platform.”

Backend Requirements:

TrainPi shall store operational documents separately from participant data.

Suggested Object Structure:

organization_documents[]

- document_type
- parsed_text
- extracted_requirements
- extracted_skills
- extracted_workflows
- extracted_role_expectations
- extracted_keywords
- extracted_tools

- extracted_compliance_requirements
- extracted_mission_objectives

AI Processing Requirements:

When documents are uploaded, TrainPi shall:

1. Extract text
2. Classify document type
3. Extract operational requirements
4. Extract workflows/processes
5. Extract role expectations
6. Extract required capabilities
7. Extract required tools/platforms
8. Extract compliance and policy expectations
9. Store processed organizational context

STEP 3 — AI ANALYSIS & COMPARISON ENGINE

Purpose:

Compare participant capabilities against operational workforce requirements.

Core Product Logic:

Participant Capability Profile

vs.

Agency Operational Requirements Profile

AI Comparison Engine Identifies:

- matched skills
- missing skills
- partial skills
- workflow gaps
- tool gaps
- policy/compliance gaps
- mission alignment gaps
- readiness risks
- experience gaps
- certification gaps
- operational readiness gaps

Operational Readiness Scoring Categories:

- Technical Skills
- Experience Alignment
- Workflow Readiness
- Mission Alignment
- Compliance Readiness
- Overall Operational Readiness

Example:

Area: SIEM

Participant: No experience shown

Requirement: Must triage alerts

Result: Major Gap

Area: Ticketing

Participant: Has experience

Requirement: Documentation workflow required

Result: Match

Area: Incident Escalation

Participant: Not shown

Requirement: Required in SOP

Result: Gap

AI Processing Capabilities:

- semantic comparison
- skills extraction
- workflow alignment analysis
- role expectation analysis
- operational gap scoring
- readiness classification
- recommendation generation

STEP 4 — RESULTS & INSIGHTS

Purpose:

Present AI-generated workforce readiness analysis to participant and organization.

Frontend Features:

- Readiness score visualization
- Strengths summary
- Gap analysis
- Capability alignment charts
- Risk indicators
- Recommendations dashboard
- Downloadable summary report

Key Insights Generated:

- readiness strengths
- operational weaknesses
- missing capabilities
- mission alignment concerns
- workflow readiness risks
- recommended development priorities

Outputs:

- Workforce Readiness Report
- Capability Alignment Summary
- Operational Risk Summary
- Learning Recommendation Summary

STEP 5 — PERSONALIZED ROADMAP & PATHWAY

Purpose:

Generate AI-guided workforce readiness pathways aligned to operational goals.

Roadmap Features:

- personalized learning roadmap
- phased learning approach
- role-aligned recommendations
- workflow-aligned training
- certification recommendations
- project/task recommendations
- AI mentor guidance

Example Roadmap Structure:

Phase 1 — Foundations

Phase 2 — Build Skills

Phase 3 — Advanced Operations

Phase 4 — Optimization & Leadership

Roadmap Outputs:

- recommended skills
- learning modules
- practical projects
- estimated timeline
- progress milestones
- operational readiness progression

AI-DRIVEN FEATURES

The platform shall support AI-guided capabilities including:

- resume/CV analysis
- operational document analysis
- workflow extraction
- skills extraction
- semantic comparison engine
- AI mentor guidance
- personalized roadmap generation
- recommendation engine
- operational readiness scoring
- workforce alignment insights

ADMIN & ORGANIZATIONAL FEATURES

The platform shall support:

- admin dashboard
- participant tracking
- organizational readiness monitoring
- analytics and reporting
- workflow gap visualization
- participant progress tracking
- downloadable reports
- AI interaction monitoring

SECURITY & DATA HANDLING

The platform shall:

- securely store uploaded participant and organizational data
- separate participant and organizational records
- support role-based access
- support secure document upload
- maintain confidentiality of uploaded organizational documents

REPOSITORY & DEVELOPMENT REQUIREMENTS

- All code must be uploaded to NanTechs-controlled GitHub repositories.
- NanTechs shall maintain administrative ownership/access to repositories at all times.
- Developer shall regularly commit code and updates to the repository.
- No source code or platform logic may be withheld from NanTechs.

PROJECT OBJECTIVE

The overall objective of TrainPi is to create an AI-guided operational workforce readiness platform capable of analyzing participant capabilities against real-world operational requirements and generating personalized readiness pathways aligned to organizational workflows, missions, and workforce needs.
